

RF Exposure Info. for Model F3507G

The Figure-1 and Figure-2 show the antenna configurations of the applying host PC devices in this application.

Figure-1 Antenna configuration of ThinkPad T400/R400

WWAN - Bluetooth:

The RF Exposure evaluation nor SAR testing in co-locating with Bluetooth is not required pursuant to the FCC document "616217 D01 SAR for Laptop v01" issued on December/07/2007, since the separation distance to the nearest WWAN Tx antenna is more than 5cm apart and its maximum power is 4.1mW.

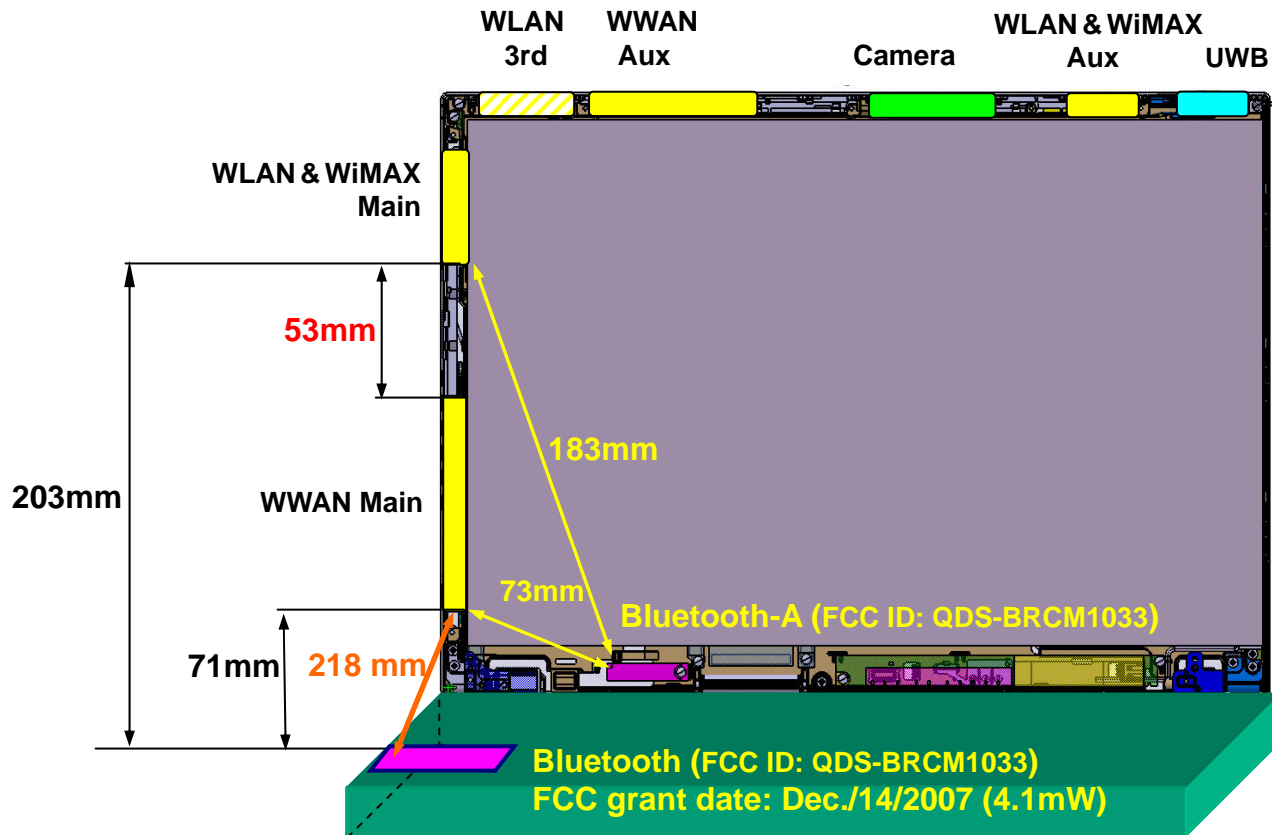

WWAN - UWB:

Since UWB transmitter is not mentioned in the section 2.1091 and 2.1093, it does not subject to RF exposure evaluation. Therefore no co-located MPE or SAR testing is required.

WWAN - WLAN:

The WWAN main (Tx) antenna and WLAN (or WiMAX) Tx antennas co-locate with 60mm of separation distance, and both devices transmit RF simultaneously.
